**RE: Security Services Appointment - Confirmation Letter**

This letter confirms on the 30<sup>th</sup> of March, 2011 SolveXia appointed Sense of Security as their information security advisor.

Founded in 2002, Sense of Security is a wholly owned and operated Australian company delivering specialist Information Security and Risk Management consulting services.

Sense of Security is contracted to perform penetration tests on the network that hosts SolveXia's business process automation tool. The security tests are performed with reference to industry leading methodologies and designed to assess the target environment for exploitable vulnerabilities. The findings from the tests are documented and then presented to SolveXia's management; these reports provide step-by-step technical instruction to remediate problem areas.

To-date penetration tests have been performed in May and November, 2011. Sense of Security continues to assist SolveXia with their information security requirements; the next penetration test is scheduled for March, 2012.

Yours sincerely

Neville Gollan  
Director, Sales & Marketing
